C-108/208 Hot & Cold Wall Hydrant

Application

C-208 Loose Key Design

PRIER C-108 provides a year round source of tempered water to areas of structures that are subject to freezing temperatures. The hydrant valve is connected to the supply piping in the heated portion of the structure, eliminating the possibility of freezing. The hot side is loose key operated to prevent unauthorized operation. Unique to its patented design, the same product is available as horizontal or vertical. Ordering the C-208 gives you the same style hydrant but with vandal proof extended lockshields with operating key on both hot and cold stems.

The PRIER C-108 has all the characteristics of the historically proven C-134 with the added protection of a self-draining anti-siphon vacuum breaker and backflow check valve. It is available from stock in lengths from close coupled to 24”, longer sizes are available on request.

Features

- Horizontal or vertical installation with same product
- Anti-siphon vacuum breaker with backflow check valve
- Internal checks to prevent thermal migration
- 3 1/2” center-to-center installation template provided
- Enclosed screw holes easily secure mounting screws
- Solid brass body, valve stem cap, seat and stem Ends
- Satin nickel plated body maintains attractive finish
- Stainless steel seat washer screw and handle screw
- Durable ACME threads secure stem at seat end
- Lock shield cap for stronger valve design
- AFG teflon with graphite packing for easy maintenance
- Standard “OO” size seat washer
- Spout aligning mark

**For the old style C-108 Series** wall hydrant stems, see C-108 Series retired style spec sheet at [www.PRIER.com](http://www.PRIER.com). PRIER universal stems are replacement stems for any size from close coupled to 14." They require cutting the rod to proper length and soldering the brass stem end to the rod as directed in instructions.
